SUMMARY

Senior full stack engineer with nearly three decades of experience designing and delivering complex enterprise systems across financial services, telecommunications, government, healthcare, and manufacturing. Deep expertise in frontend architecture, API design, cloud infrastructure, and secure identity systems. Frequently operating in an architectural capacity — owning system design, integration strategy, and technical direction across client engagements. Actively leveraging agentic AI, MCP based tooling, and AI assisted workflows to accelerate development while raising the bar on testing, documentation, and code consistency. Proven track record leading high stakes implementations for Fortune 50 organizations, federal agencies, and national service providers — translating complex technical problems into clear solutions for clients, cross functional teams, and executive stakeholders.

Enterprise Systems · Cloud & Infrastructure · API Architecture · AI Augmented Development · Secure Identity

EXPERIENCE

Senior Implementation Consultant

Qlik   Mar 2020 — Feb 2026

Operated in an architectural capacity across complex enterprise client engagements — owning system design, API integration strategy, and technical direction.

- Designed and implemented secure, scalable API integration layers connecting enterprise systems to cloud analytics platforms using OAuth, SAML, and JWT
- Became the go to escalation point for complex API integration issues — consistently resolving problems that had stalled client teams and internal engineers
- Architected frontend solutions using React, Next.js, and TypeScript, deployed on AWS, Azure, and Kubernetes/Docker infrastructure
- Built rich data visualization and embedded analytics experiences on Qlik Sense Enterprise & SaaS, supporting tens of thousands of end users
- Guided enterprise engineering teams through complex authentication and authorization implementations as technical authority on identity architecture
- Drove full stack performance optimization across client engagements, improving platform responsiveness and reliability under high load conditions
- Integrated agentic AI and MCP based tooling into development workflows — accelerating code generation, test coverage, documentation, and review cycles
- Served as client facing technical architect on high stakes enterprise deployments for Fortune 50 organizations, federal agencies, and national service providers
- Mentored enterprise engineering teams, elevating capability on authentication architecture, frontend patterns, and delivery best practices

Application Developer

RCN   Jan 2012 — Mar 2020

Full stack developer owning consumer facing and internal web/mobile applications across the complete product lifecycle, from development through marketplace release and ongoing iteration.

- Co designed and built a custom SAML Identity Provider integrating with numerous TV Everywhere content platforms — critical infrastructure enabling secure subscriber authentication across the organization's digital ecosystem
- Owned and maintained Ubuntu based production infrastructure 24/7, handling provisioning, monitoring, deployment, and uptime — effectively operating as platform engineer for the team
- Designed, developed, deployed, and supported consumer facing and internal web and mobile applications (RCN2Go, RCN Mobile, RCN.com)
- Collaborated with a major media technology partner to develop a content discovery system, serving as primary technical point of contact across internal teams and external partners
- Worked across the full stack using Ruby on Rails, JavaScript/jQuery, MySQL, Redis, and Linux based infrastructure (Apache, nginx)

Lead Software Developer

Bridgeport National Bindery   Oct 2006 — Jan 2012

Led a development team designing and building a sophisticated B2B print job integration platform using the PrintTalk XML standard — replacing manual processes with an end to end automated pipeline.

- Architected a system enabling major digital publishing platforms, global e commerce organizations, and academic institutions to submit print jobs electronically
- Designed and built production lifecycle management covering customer relationship tracking, cost and materials reporting, manufacturing workflow automation, and shipping coordination
- Modernized how the organization received and processed work from enterprise clients, transforming a manual intake process into a fully automated, scalable integration platform
- Partnered with prepress, print, and shipping managers to design software coordinating workflows across the organization

Professional Services Consultant

Mitem Corporation   1999 — 2006

Delivered custom integration solutions for enterprise clients across major national retailers, utility providers, and healthcare organizations — modernizing workflows without replacing critical legacy infrastructure.

- Built modern software interfaces integrating seamlessly with legacy terminal systems (IBM 5250, 3270, VAX, VT100), bridging decades old infrastructure to contemporary platforms
- Partnered directly with enterprise client teams to diagnose integration challenges, define technical requirements, and communicate solutions across technical and non technical audiences
- Received a Macromedia Flex award for UI/UX excellence on a technically complex enterprise integration project
- Delivered solutions for clients including LL Bean, Cinergy, Alliant Energy, Baltimore Gas & Electric, and Western Resources

Junior Consultant

Winthrop Technologies   1996 — 1998

Early career contributing code to enterprise logistics tracking products and delivering desktop and automation solutions for Fortune 50 organizations.

- Built a DTMF phone interface enabling clients to retrieve logistics data via telephone — predating modern IVR systems
- Delivered desktop and automation solutions for Fortune 50 pharmaceutical and industrial organizations, including work supporting C suite executive operations

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML5, CSS, Tailwind CSS, User Interface Design

Backend: Node.js, Ruby, REST APIs, SQL, Python

Cloud & Infrastructure: Linux, Git, AWS, Docker, CI/CD, Azure, nginx, DevOps, Kubernetes

Identity & Security: OAuth 2.0, OIDC, SSO, SAML, JWT, Authorization

Data: PostgreSQL, Redis, Data Visualization

AI & Tooling: Agentic AI, MCP Tooling, AI Assisted Workflows, Agile Methodologies

Prior Experience: AngularJS, Ruby on Rails, C#, .NET, Java, PHP, Unix, Apache, IIS, SQL Server, MySQL
